Figure 1. Time course of the effect of 100 mg/kg of diazepam on the plasma concentration of diazepam in a single-dose study. The graph shows a peak concentration of approximately 0.8 mg/L at 1 hour, followed by a decline to about 0.4 mg/L at 4 hours, and then a slight increase to about 0.5 mg/L at 8 hours. A dashed line represents the theoretical elimination curve, and a solid line represents the observed concentration.
